

Rosedale South State School

New General Learnings Areas (GLA) and administration facility

Rosedale South State School is a quality learning provider, set in a beautiful natural setting away from major roads. Positive attitudes towards learning and behaviour are fostered through a quality curriculum and a stimulating learning environment.

Project scope

To service the increasing number of enrolments in the region, the Department of Education required new General Learning Areas and administration facilities to expand the school's capacity.

Wiley delivered construction services in a live operating environment, with a short construction program of only twelve weeks to completion.

The project, designed by Cobie Group Architects, includes:

- Two General Learning Areas (GLAs)
- Undercover Learning Area
- Two office areas
- Kitchenette
- Data room

Wiley delivered the project early in the new year to limit any impact to the school's daily operations.

Business value to client

This project enabled the school to welcome more students, as well as the local community. It is a great investment in the future of the school and a continued contribution to a growing community.
